

Chapter 22 - Semantic Validation: Stage 5 of Semantic Knowledge Development Lifecycle

A validated ontology is one where no opponent can find a counterexample. The reasoner is not your enemy -- it is your most rigorous sparring partner in the game of validation.

- Exercise Included: Exercise 19
- Suitability Analysis: Section 4.10.4 naturally covers validation constraints, consistency checking, and shape/schema validations (e.g., SHACL or equivalent constraint checks)
